

Exercise – 1 Creating Hotspots for an Image

1a) Create a web page using various html tags such as formatting tags, table, image, list, anchor etc.

1b) Create a web page with the following using HTML

a. To embed a image map in a web page (do for India Map)

b. To fix the hot spots in that map for various states of India

- When hotspots are clicked information about each state should be displayed as separate web page
