

Exercise 11**Online Examination using JSP**

Develop a Multiple Choice Question based online examination using JSP. The front-end should be a HTML page with MCQ implemented using radio buttons and a submit button “Finish”. Once the questions are answered and “Finish” button is clicked, the details should be send to a JSP file for further processing. The JSP file should validate the answers with the answers stored in the database, compute the score and displays the score to the user. [Use MySQL database to store questions and corresponding answers]
